1.	Cerebral palsy	40	26	66

Name of activity: Provide centre based PRT to 66 CWDs in 3 centres

Date of Provide Therapy: Jan to June-2018

- Objective: 66 CWDs mobility and functional skill will develop
- Progress: 66 CWDs received therapy in 48 sessions at 3 Centre based therapy.
- Participant: 66 (Boy- 40, Girl-26)

Provide center based PRT:

66 CWDs received therapy from 03 Centers. 66 CWDs are receiving PRT regularly. Through providing therapy the children are developing gradually mentally and physically day by day. Getting therapy regularly parents are getting the light of hope for their children.

Therapy through using assistive devices: Children are getting physically develop not only through therapy but also using assistive devices. It helps very much to change the condition of the child. We have different kinds of devices; such as corner chair, standing frame, AFO, walker, special chair etc.

Therapy by different kinds of materials: We used different kinds of materials and toys for children for their development. The children those who are not able to use their hand properly for them we used soft materials for touching, catching and we let them experienced what is soft and what is hard. So that they can develop them about fine motor and gross motor through experience.

Stimulation therapy: Our CP child has very less sense in their total body. And we stimulate them through stimulation therapy. We used saving foam, soap, jelly powder and lotion for make their whole body soft and relax. And for this effort child got good experience and their senses rise up.

Activity of daycare mothers: Mothers come to daycare and they learn their children's therapy and exercise. They exercise in daycare and do practice at home. When they don't understand anything they come in daycare and learn again. Mothers have good communication with each others. They have good sharing. They share their sorrow and troubles with each other and they get inspiration. They have really good unity and strength. They enjoy very much in daycare.

Home visit:

Our child those who are not coming daycare regularly, we go to see them at their home and we listen their problems and try to solve it. In these six months we have visited 20 families. Sometime they don't come because of their illness (EPILEPSY). We advise them to go to the doctors and received medicine from us. After home visit they are coming daycare regularly.

MOTHERS MEETING:

We arranged three mothers meeting in different centers this half year. We had different kinds of discussions. We had discussion about therapy, moving game, development of child, and activities of day care. We also discussed the responsibility of parents. We discussed to increase consciousness of the society and family. Monitoring officer of PCC visited daycare regularly and asking questions to the mothers; our cp daycare staff and volunteer do they work properly or not? Our mothers, do they exercise the therapy regularly? Do they have any

problems or any doubt about therapy? We inspired our mothers to come regularly in daycare. We told them the importance of therapy. We explain the needs of medicine for epilepsy because our most of the child has epilepsy. When they face any problem at home they can share with us so that all together we can solve the problems.

At the end of the meeting they shared with us their feelings. They had good experience through work together. They were happy with staff and volunteers activities. Mothers try to do exercise regularly at home. And they go to the doctor for good medicine and suggestions.

Medicine Support:

In our C.P. daycare we provide medicine for poor children, especially those who are suffering from epilepsy. We have been providing medicine since January. Till now we have given medicine for 20 children. So all together we have given medicine 140 times.

Assistive device distributions:

This year we were able to give devices in time. We have given 27 pairs of normal and dynamic AFO. We gave 5 wooden chairs, 33 corner chairs, 11 standing frames, 2 special wheel chairs, gaiter 3 pair, Walker 6 pair and therapy tool 2 pair etc.
